

What is blue-tooth

Blue-tooth is a short distance wireless communication technology, electronics devices can communicate with each other without any wire. Blue-tooth supply 100m and transmit distance over 1M bytes per second.

BW-T blue-tooth weighing system

- communication frequency: 2.4GHz
- support network operate
- communication distance 100m
- attach DataCom software
- auto detect baud rate
- manual, auto, time interval communication mode selectable
- data export to Excel, can do sort, filter and other operate, can create report and chart.
